

MODE SD-CORE + VMWARE SD-WAN

THE IDEAL NETWORK AT EVERY MOMENT™

**Eliminate Networry™ with
Total End-to-End Control of:**

Performance
& QoS

MultiCloud &
SaaS QoE

Resource
Optimization

Data Security
& Compliance

Mobile QoS
& Security

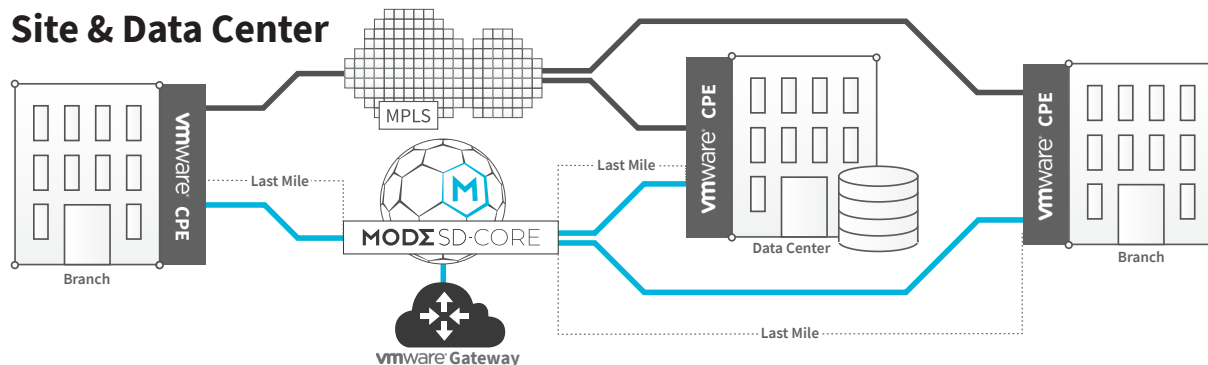

Scale
& Cost

IDEAL FOR ANY APPLICATION

MPLS Backup

Site & Data Center

MultiCloud

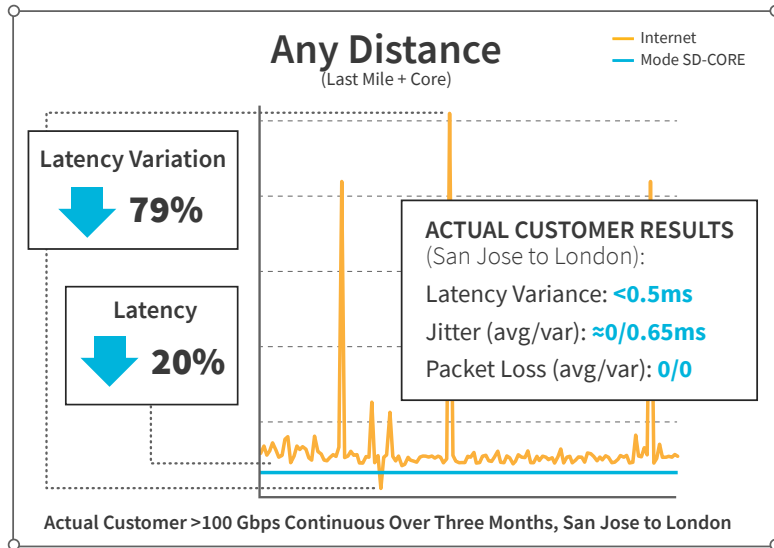

- + Savings
- + Performance
- + Flexibility
- + Scale
- + Mobile QoS & Security

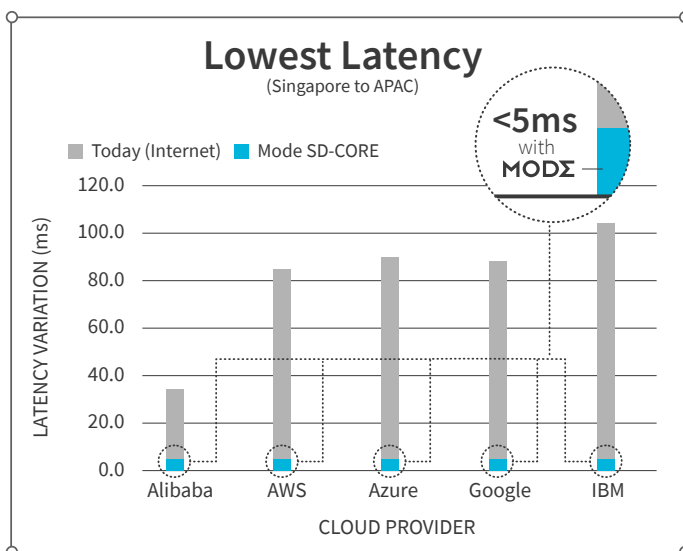

End-to-End Performance

QoS and Great QoE: Any application, cloud, distance, or bandwidth

Singtel + MODΣ PRESENT:

Internet Data courtesy Cloud Performance Benchmark 2019-2020 Edition from ThousandEyes

End-to-End Optimization

Increase network agility

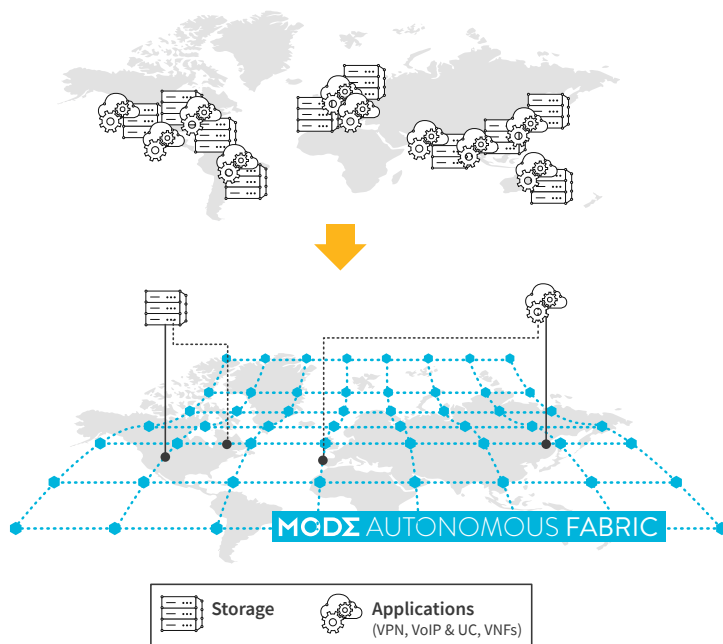

- Frictionlessly move and optimize applications, compute, storage, and workloads anywhere in the world
- VPN, VoIP/UC, VNFs, etc.

Enhance network control

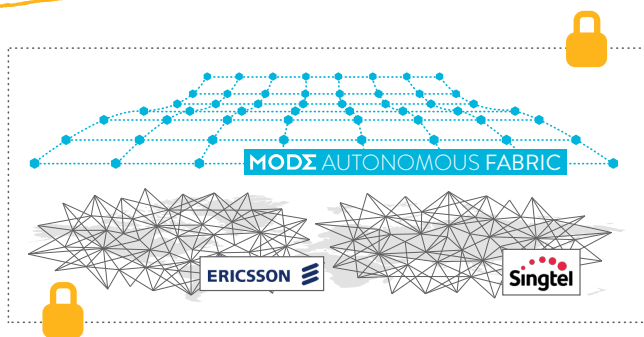

- Works with VMware SD-WAN to software-define your entire WAN for complete, real-time end-to-end visibility and control

Simplify network management

- Make jitter, latency variation, and packet loss irrelevant to QoE over any distance, for any application (even video conferencing)
- Internet pricing makes Mode SD-CORE affordable enough to use for everything

**DON'T OUTSOURCE
YOUR SECURITY**

End-to-End Security

- Support for VMware SD-WAN end-to-end encryption
- Low private network attack surface
- Built on Singtel and Ericsson Private Fiber Backbones
- Continually adding new Tier 1 Private Fiber and PoPs

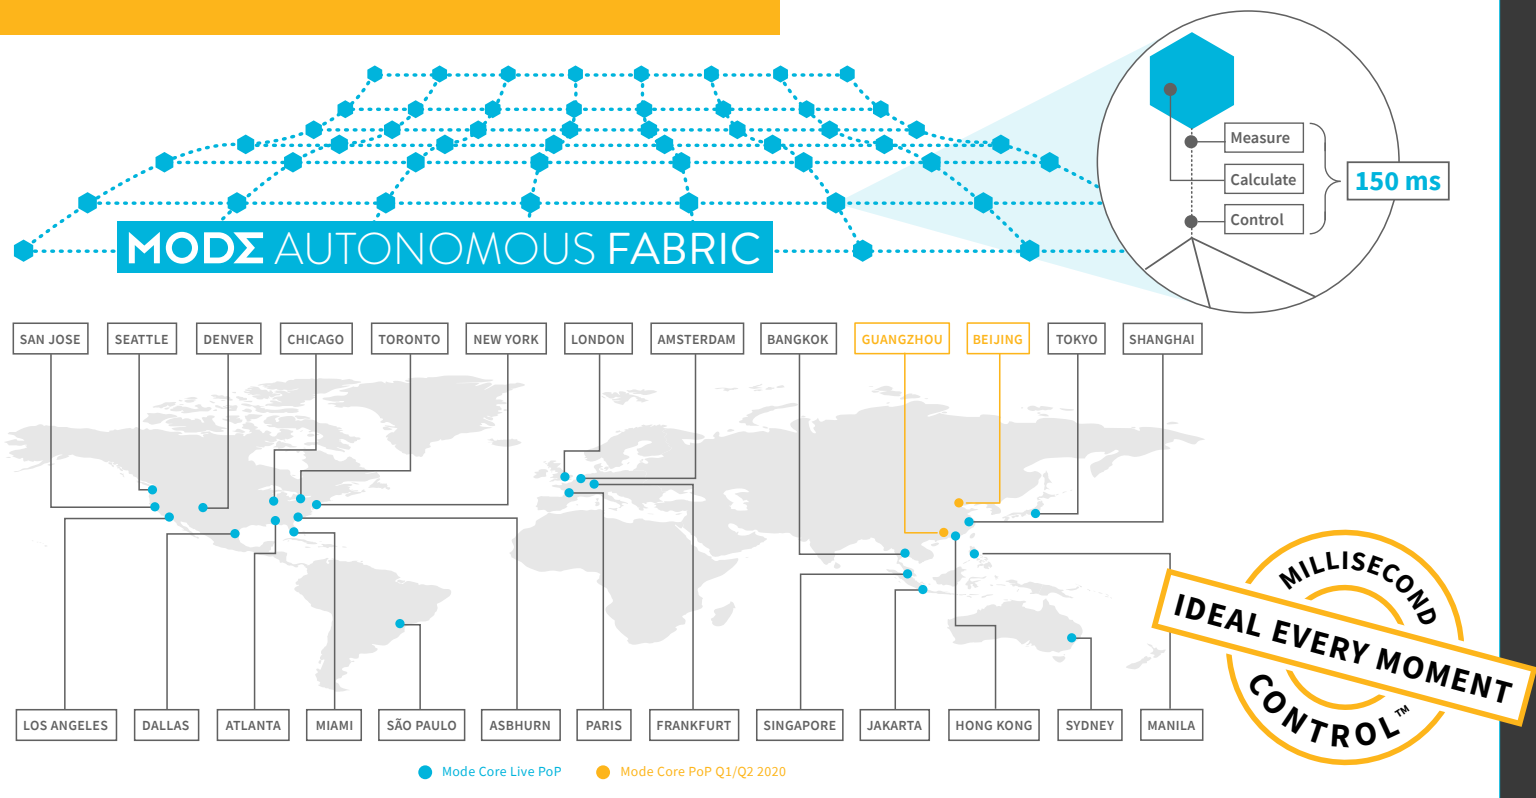

End-to-End Savings

Frictionlessly move traffic between Internet, MPLS, and Mode SD-CORE

- Move at your own pace
- Only pay for what you use
- Save without sacrificing performance or reliability

IDEAL OVER ANY DISTANCE

IDEAL IN AN INSTANT

1.

Log in to Mode SD-CORE Portal

2.

Input the public IP of all VMware SD-WAN Gateways

3.

Mode will return an anycast IP for each Gateway (sends encapsulated traffic from VMware CPE through Mode SD-CORE)

4.

Input each anycast IP into VMware Orchestrator (activates the Gateways and directs CPE traffic through Mode SD-CORE)

5.

End Networry™
